

Science Fair

Step 7-Writing the Conclusion

Third Grade

- What were you trying to find out in the experiment?
- What was your procedure?
- What was your hypothesis?
- Was your hypothesis right or wrong? How do you know?

Fourth Grade

- What were you trying to find out in the experiment?
- What was your hypothesis?
- What experiment did you do to answer the hypothesis?
- What data did you collect?
- Did the data prove your hypothesis right or wrong?
- Could this experiment have been made better? If yes, explain.

5th Grade

Lead paragraph

1. Hook the reader with an interesting fact related to your topic.
2. Explain what the goal of your project was
3. Explain why you wanted to do this project.

1st Body paragraph

4. Explain what your original plan or hypothesis was for the project
5. Describe the research you found and explain how it helped you form a plan.

2nd body Paragraph

6. Describe your procedure or design process and explain what you did to make sure your data would be reliable

7. Describe any challenges you faced while completing this experiment and how you overcame them.

Conclusion

8. Explain what data you got from your project and use this data to explain what you found in this experiment and whether or not you met your goal.
9. How will information from this project improve people's lives or make the world a better place?
10. Would you do anything differently if you could do the experiment again or what else would you like to find out about this topic?
